Setting the CLASSPATH

The Stylus XML Converters for Java jar file, XMLConverters.jar, must be included in your CLASSPATH. The CLASSPATH is the search string your Java Virtual Machine (JVM) uses to locate Stylus XML Converters for Java on your computer. If the Stylus XML Converters for Java jar file is not included in your CLASSPATH, you receive a ClassNotFoundException exception when trying to use Stylus XML Converters for Java.

Windows Example

```
set CLASSPATH=.;c:\xmlconverters\lib\XMLConverters.jar
```

UNIX/Linux Example

```
CLASSPATH=./home/user1/xmlconverters/lib/XMLConverters.jar
```

Sample XML Converters Application

This simple application converts an EDI file of the X12 dialect (myEdi.x12) to an XML file with the name myEdi.x12.xml.

```
import com.ddtek.xmlconverter.*;
import javax.xml.transform.stream.*;

public class ConverterOne {
    public static void main(String args[]) throws Throwable {

        System.out.println(args[0] + " --> " + args[1]);
        Converter toXML = new ConverterFactory().newConvertToXML("converter:EDI");
        toXML.convert(new StreamSource(args[0]), new StreamResult(args[1]));
    }
}
```

To invoke this program, type the following command:

```
javac ConverterOne.java
java ConverterOne myEdi.x12 myEdi.x12.xml
```

See demo.java in the \examples directory for additional examples of Stylus XML Converters for Java applications.
